

compatibility at a glance

The diagram below outlines the suitability of mixing any two of the main Ballance products, based on their chemical compatibility.

- Normally mixable
- May be mixed if special precautions are followed
- Not recognised as mixable

Note that mixes that contain salt (up to 10%) should not cause any problems. The exception is mixes of salt and **n-rich** urea, which will quickly become wet and sticky. Mixes of Durasul and **n-rich** urea will also become wet and sticky.
